

Pragmatism and Scientific Practice – Historical and Applied Perspectives

Workshop, August 11 – 12, 2022

NOTE .

This projection depends on $\int \frac{d\theta}{\sqrt{1-\theta^2}}$
where $t = \tan \frac{1}{2}NPD$, $\theta = \log \frac{1+t}{1-t}$,

It possesses the following properties :

1. The whole sphere is represented on repeating squares.
2. The part where the exaggeration of scale amounts to double that at the centre is only 9 per cent. of the area of the sphere, against 13 per cent. for Mercator's projection, and 50 per cent for the Stereographic.
3. The angles are exactly preserved.
4. The curvature of lines representing great circles is, in every case, very slight, over the greater part of their length.
